

LEARNING FROM SPOTIFY

The three questions Spotify asks every listener.

Most 100k businesses only ask one of them.

WHAT SPOTIFY IS QUIETLY DOING

Spotify knows, three weeks in advance, which listeners are about to leave.

It is not magic. It is three plain questions asked every week about every listener.

QUESTION ONE. HOW RECENTLY?

When did this listener last open the app?

Yesterday is a very different listener than 18 days ago, even if both appear as active in the last 30 days.

QUESTION TWO. HOW OFTEN?

How many sessions in the last 30 days?

Listeners who open the app five days a week almost never churn. Listeners who open it once a week are one busy week away from leaving.

QUESTION THREE. HOW MUCH?

How much money has the listener paid over their lifetime?

Not this month. Total.

One listener can be worth ten times another on a spreadsheet that only counts 'active users.'

THE STRATEGY

Score every customer on all three. Short list the ones whose recency has suddenly slipped.

That short list is the only group that actually needs a win-back email.

THE TECHNIQUE IS 50 YEARS OLD

This idea has been around since the 1960s. I almost never see businesses near 100k use it, even though it takes one afternoon to set up.

HOW TO APPLY IT THIS WEEK

Export the last 12 months of purchases.

Score each customer on recency, frequency, and total spend.

Pick the top ten percent. Send them a one-line note from a real person on your team this week.
