

FOR 100K BUSINESSES

Your churn number is not the number to watch.

Here is the one that is.

WHAT CHURN IS

Churn is the share of customers who leave in a given month.

It is a lagging number. By the time it moves, the decision to leave happened weeks earlier.

A BETTER NUMBER

Second-purchase rate inside 90 days.

It tells you now what churn will tell you in six months.

WHY THIS NUMBER MOVES FIRST

A second purchase means the person found a second thing worth paying for.

That is the earliest signal that your funnel is bringing in the right kind of buyer.

HOW TO CALCULATE IT

Pull your last 300 buyers from three to six months ago.

Count how many bought a second time within 90 days of the first.

Divide. Multiply by 100.

HEALTHY RANGES

- Under 10 in 100: your top-of-funnel is bringing in the wrong person.
- 10 to 25 in 100: room to grow. Look at the first 30 days of experience.
- Over 25 in 100: your foundation is fine. Scale the channel that works.
